Title: SYSTEMS AND METHODS FOR FACILITATING AGREEMENT
DEFINITION VIA AN AGREEMENT MODELING SYSTEM

ABSTRACT OF THE DISCLOSURE

Systems and methods are provided for facilitating definition of an agreement
between a party and a counter-party via an agreement modeling system. According to
some embodiments, an agreement type is automatically determined based on a covered
products matrix and a plurality of product types associated with an agreement (*e.g.*,
financial products associated with a transaction agreement). In addition, an agreement
term may be determined in accordance with the agreement type. According to other
embodiments, an indication of an agreement term is stored in association with an
indication of a term date such that an applicability of the agreement term can be
automatically determined based at least in part on the term date. In still other
embodiments, a value associated with an agreement term is stored along with an
indication of a right associated with the agreement term (e.g., via an XML data format).
